Screenshot Sharing Add-On For Unity Editor

## Snip - n - Tweet / Version 1.0

Thanks for downloading Snip - n - Tweet - the best screenshot sharing plugin for Unity. It is very simple to configure and to use this utility. All you need is a Twitter account!

Setup Steps

When you've imported the asset first please make sure you have the following files.

Next, open your scene and drag-n-drop the Snip-n-Tweet game object into the scene's hierarchy.

Highlight the object, open the Inspector tab, specify your Twitter account credentials and you are done.

To use the post feature of the plugin, run your game after the plugin is configured.

Once Twitter validates that you have a provided valid credentials, you will be able to post annotated screenshots every time you run the game. Press Snip & Tweet button to post the tweet to your timeline.

To disable the plugin simply remove it from your hierarchy.

Support

If you are experiencing any issues getting to this point or receive code 500 error in your console. Please contact us at support@playent.net and we will help you resolve the issue.

Thanks for using Snip-n-Tweet!
